

In-class Exercise - Boxes

Due by the end of class

Instructions:

- Use CSS to match the handout image above
- Use style with **External Style Sheets** (CSS)
- Please submit your final work (in a zip) on Blackboard
- **You SHOULD NOT change anything in the html body!**

Requirements:

- The body section has the following CSS styling:
font-size: 80%;
font-family: "Courier New", Courier, monospace;
letter-spacing: 0.15em;
- Main page "box" on this page is:
 - Give it top and bottom margin 10px and leave the left and right auto to adjust.
 - The main "**box**" on this page has a double-lined 4px border around it, padding is 20 pixels.
 - The size of this box will expand and contract if the browser window is resized. Set properties to prevent the page from becoming too narrow or too wide, the maximum here is set to 940 pixels and the minimum is 720 pixels.
- The logo:
 - Set width to 150 pixels.
 - This is centered the same way as the main page box, give it top margin 10px and bottom margin 25px and leave the left and right auto to adjust.
- The navigation is created using an unordered list.
 - The list width is set to 570 pixels.
 - There's a padding of 15 pixels to create space between each of the links.
 - Give it top and bottom margin 0px and leave the left and right auto to adjust.
 - There are borders set to the top and bottom of this list to make it stand out. Notice the difference between the top and bottom border. Top border is 2px, and bottom border is 1px. Color is black.
- List items:
 - Each of the items in the list behave like inline (rather than block-level) elements. This enables the navigation links to sit next to each other horizontally.

- Top and bottom margins are 0 pixels and left and right margins are 3 pixels.
- The paragraphs:
 - Text is center aligned
 - width set to 600 pixels. They actually end up the approximately same width as menu because of other existing gaps.
 - Give it top and bottom margin 20px and leave the left and right auto to adjust.
- All the links:
 - have a default color of black
 - all capitalized
 - no underline
 - A padding was added to make them separately nicely for readability, use (6, 18, 5, 18) pixels in clock-wise order (top, right, bottom, left).
 - When someone hover over the link, it would turn to red.
 - For any link that has the “on” class, the link should be red.
